

PEKO 300

Two components adhesive for screen printing

DESCRIPTION

Two components adhesive of quick drying time for screen printing screens. Resistant to solvents and high adherence on wood and steel. Specially advised for high tension screens.

RECOMMENDED APPLICATION

Wood frame
Iron frame
Aluminum frame

SPECIFICATIONS

Color	Red
Flammable	Yes
Pot life closed packaged	1 year
Pot life of preparation at 24°C	5 – 8 hours

STORAGE

Do not expose to temperatures below 5°C. Expiration is 12 months for closed package and under correct temperature conditions.

VERY IMPORTANT: PEKO 300 is sensitive to frost

PACKAGING

PEKO 300 / 5L
PEKO 300 CATALYSER / 1L

HOW TO USE

Working temperatures must be over to 19°C

Under cold weather, the product becomes gelatinous. To recover the standard viscosity, we must heat to temperature of 20 – 26°C and shake well before using.

Add 20% of PEKO CATALYSER to PEKO 300. Pot life of the mixture is between 5 to 8 hours, depending of the environmental conditions.
